

INTERTEC

| AIRPORT DEPARTMENT

INTERTEC AIRPORT DEPARTMENT specialises in installation and commissioning of technical system solutions integrating all airside equipment.

From arctic Greenland to tropical Africa, the INTERTEC AIRPORT DEPARTMENT has carried out a wide range of airport projects for more than three decades.

Hands-on experience has taught us that the key to successful airport management lies in finding the perfect combination of operational efficiency and safety, technical reliability and financial viability.

Tailored solutions

INTERTEC's team of airport specialists has a long record of tailoring the optimum solution for each individual project irrespective of diversity and scope.

INTERTEC solutions are based on commercially available hardware, equipment software and user interface, but also specially developed in close co-operation with air traffic controllers and airport maintenance technicians.

Our systems qualify for the official approval of the Civil Aviation Authorities.

Partnership

We believe that good solutions spring from a close and mutually advantageous partnership with our clients in all phases of the project.

Training

Contracts for service and maintenance of airside installations and training of airport staff are an integral part of our airport projects.

Project financing

Substantial expertise within project financing enables us to arrange favourable financing solutions mainly through Scandinavian and European bankers and government programmes.

Core competencies

INTERTEC offers services within the following areas of airport management and operations:

- Project financing
- AGL custom design
- Project management
- Delivery and installation
- Installation and commissioning
- Maintenance
- Training

System solutions

INTERTEC AIRPORT DEPARTMENT supplies the following equipment from leading manufacturers in the world market, all of which is easily controlled and monitored by our integrated control packages at selected locations in the airport:

Control systems

- Airfield remote control and monitoring system (ARCAMS)
- Individual lamp control and monitoring system (ILCAMS)
- Event and alarm systems

Airfield ground lighting systems

- Airfield (ground) lighting systems
- Precision approach path indicator system (PAPI)
- Apron floodlight
- Airfield signs

Meteorological systems

- Aviation weather observation system (AWOS)
- Meteorological sensor equipment (MET)

INTERTEC

INTERTEC A/S is the parent company in the INTERTEC Group, which designs, supplies, installs and services projects within selected product areas in both the Danish and international markets. INTERTEC specialises in development of wind power energy projects, processing lines in the food and beverage industries as well as technologically advanced system solutions for airfield installations in airports worldwide.

INTERTEC FOOD DEPARTMENT specialises in turnkey electrical installations and automation systems worldwide and has considerable process knowledge obtained through integration of control systems into a large number of projects within the food industry, pet-food and fish feed industries. INTERTEC FOOD is an active partner to both the Danish and the international industrial sectors and works closely with major Danish equipment and process suppliers.

INTERTEC WIND A/S works to support the expansion of wind power through the development of profitable wind projects in Europe, Thailand and in other selected countries outside Europe. We work in close cooperation with local partners and an extensive network of specialists within a wide range of fields. INTERTEC WIND's core competencies include all activities within project development from identification of suitable projects, conclusion of agreements, project/site optimization/engineering, environmental studies, application for permissions, project management and financing models.

INTERTEC AIRPORT DEPARTMENT has many years' experience within a wide range of technical airport installations in both the Scandinavian and international markets. Our installations include equipment and services essential for modern airport operations such as remote control systems, power supply and distribution as well as airfield lighting.
